INTRODUCTION

Provincial Treasury produces socio-economic profiles for each of the Western Cape municipalities on an annual basis. These profiles provide the Western Cape municipalities with data and analyses pertaining to their municipal area, which may assist in planning, budgeting and the prioritisation of municipal services.

The profiles include information on recent trends in GDP and labour market performance, demographics, education and health outcomes. It further unpacks per capita income, inequality and poverty, access to housing and basic services as well as crime levels.

The indicators reflect the socio-economic reality of municipalities. As such, valuable insight can be gained as to the developmental challenges faced by communities residing within a specific geographical area. While some developmental challenges are not within the municipality's mandate to address, these profiles also provide spatial information for other spheres of Government in order to improve the quality of lives of people within each municipal area.

This profile uses data primarily sourced from Statistics South Africa, administrative data from sector departments, the Municipal Review and Outlook (MERO), *Global Insight Regional Explorer* and Quantec. The data sourced from sector departments are the most recent that is available. The Statistics South Africa 2011 Census and 2016 Community Survey contains the latest survey data available at municipal level.

The format of the profile allows for easy readability with the data being displayed in infographics, followed by the relevant trend analyses.

The information contained in this profile highlights information for the Kannaland Municipality in relation to the broader Garden Route District.

Sectoral Overview

In 2020, the economy of Kannaland was valued at R1.4 billion (current prices) and employed 9 030 people. Historical trends in GDP between 2016 and 2020 indicate that the municipal economy declined by 0.1 per cent on average per annum. The 2020 recession made a substantial dent in the average growth rate over the period, but load shedding, the drought and the national technical recession also played a major role in prior years.

Estimates for 2021 however indicate a marked recovery in growth (4.8 per cent) from the effects of the COVID-19 related restrictions to economic activity in 2020. It was largely driven by growth in the agriculture, fishing and forestry sector (7.4 per cent) as a result of favourable weather conditions and commodity process. The wholesale and retail trade, catering and accommodation sector also performed well, growing at an estimated 7.2 per cent in 2021 as tourist activity resumed. The construction (-3.2 per cent) and general government (-3.4 per cent) sectors were the only sectors that experienced further economic decline after the easing of restrictions.

Despite the economic recovery experienced in 2021, the economy continued to shed jobs, with an estimated 429 net jobs lost. Jobs were lost in all sectors of the economy but was largely driven by job losses in the wholesale & retail trade, catering & accommodation (-134 jobs); agriculture, fishing and forestry (-108 jobs) and manufacturing (-47 jobs) sectors, reflecting that employment creation is lagging the improved GDP.

Economy and Labour Market Performance

Formal and Informal Employment

It is estimated that Kannaland's total employed will in 2021 amount to 8 593 workers, of which 6 058 (70.5 per cent) are employed in the formal sector and 2 543 (29.6 per cent) are informally employed. Employment in the formal sector had an annual average decline of 0.5 per cent from 2016 to 2020 while the informal sector suffered an annual average decline of 6.5 per cent over this period. The informal economy was responsible for the majority of the job losses in 2021. This is a concern as the informal economy should be able to act as a buffer during times of economic recession.

Most of the formally employed consisted of low-skilled (47.0 per cent) and semi-skilled (33.9 per cent) workers. The skilled category only contributed 19.1 per cent to total formal employment. The skilled category grew at a pace of 1.2 per cent per annum from 2016 to 2020 notably outpacing low-skilled (-1.7 per cent) and semi-skilled employment (0.2 per cent). The growth in the skilled category reflects the increasing market demand for skilled labour and the need for skills development initiatives.

Unemployment

Kannaland (estimated at 12.6 per cent in 2021) had the second lowest unemployment rate in the Garden Route District and is above the District (21.1 per cent) and the Western Cape (25.1 per cent) unemployment rate. Unemployment has been on an upward trend from 2015 (7.3 per cent) to 2021 largely driven by the job losses as a result of the drought, loadshedding and economic recession over this period. The not economically active population has also increased from 2020 to 2021 as job losses and an insufficient supply of jobs have led to an increasing number of discouraged work-seekers. Unfortunately, most job losses affected low skilled and informal workers who are more vulnerable to living in poverty during times of economic decline.

Estimated Population 2026
20 137

Demographics

Population

As of 2022, 3.4 per cent of the Garden Route's population resides in the Kannaland municipal area. The population of the municipal area totals 21 575 persons in 2022 and is estimated to decrease to 20 137 persons by 2026. This equates to an estimated average annual decline in the population of 1.7 per cent for the period. The estimated population growth in the Kannaland municipal area is significantly below the District growth rate of 1.0 per cent. This is an indication of outmigration.

Sex Ratio

The overall sex ratio (SR) depicts the number of males per 100 females in the population. The data indicates that as of 2022, there are more females than males in the Kannaland municipal area with a ratio of 53.4 per cent (females) to 46.6 per cent (males). The sex ratio is therefore 87.3 meaning that for every 100 women there are 87 men. The ratio will remain relatively stagnant towards 2026 (87.0). The high percentage of females compared to the males reflects a potential outflow of working males from the municipal area or higher male mortality rates.

Age Cohorts

The infographic also depicts the population composition of the municipal area per age cohort. These groupings are expressed as a dependency ratio which indicates those who are part of the workforce (Age 15 – 64) and those who are dependent on them (children or senior citizens). Between 2022 and 2026, the largest average population decline per annum was recorded for the aged cohort (3.1 per cent) this is reflective of declining life expectancy or outmigration of aged as they retire in any other areas. The working age cohort is also estimated to be declining on an annual basis by 1.6 per cent on average, largely due to outmigration for work opportunities. Children (0 - 14 years) are also declining, albeit at a smaller rate of 1.5 per cent per annum. This is potentially the result of children migrating with their parents, as well as declining fertility rates. Due to the faster decline in the aged and child cohorts, the Kannaland dependency ratio is expected to decline towards 2026. The dependency ratio however remains high. A high dependency ratio implies greater pressure on social systems and the working aged population for financial support.

Household sizes

The average size of households are expected to remain constant at 4.1 from 2022 to 2025 and the decline slightly to 4.2 in 2026. The anticipated decline in household size can be related to declining fertility rates, outmigration of household members, and cultural changes in terms of intergenerational households. The declining population and declining household sizes may influence the demand for housing stock in the future.

Population density

Population density is the measurement of the number of people that make up a population in a defined area. Factors affecting population density include economic, social, connectivity/location and accessibility factors. These figures improve responsiveness and assists municipalities with planning and budgeting for effective service delivery and combatting environmental risks. In 2022, the population density of the Kannaland municipal area was the lowest at only 5 persons per square kilometre. The population densities of the various local municipal areas within the Garden Route District compare as follows:

● Kannaland	5 people/km ²
● Hessequa	9 people/km ²
● Oudtshoorn	25 people/km ²
● George	43 people/ km ²
● Mossel Bay	48 people/km ²
● Knysna	69 people/km ²
● Bitou	72 people/km ²

Education

Access to education

Education is one of the primary resources of change. Its role is to help people acquire knowledge and skills, which can be used to acquire jobs, start businesses and produce goods and services.

Education Infrastructure

There are 14 schools within the Kannaland municipal area, of which 92.9 per cent are no fee schools. This is positive to note as nationally 24 per cent of learners in 2021 indicated that they dropped out of school because they could not afford it (General Households Survey (GHS), 2021). Furthermore, of the 14 schools, 5 were equipped with libraries. The availability of library facilities within schools contribute towards narrowing the academic attainment gap by allowing students access to information which is in turn directly linked to improved education outcomes.

No additional schools will be built in the Kannaland municipal area from 2022/23 to 2024/25 (MTEF).

Learner enrolment

A total of 4 718 learners were enrolled in the municipal area in 2019 and this number increased to 4 890 in 2021, reflecting a 1.8 per cent increase in learner enrolment per annum. The estimated decline in the child population may impact on learner enrolments in future.

Learner teacher ratio

With 14 public schools in the Kannaland municipal area, the learner teacher ratio is 31.7:1. This is lower than the recommended upper limited of 40:1 for ordinary primary schools and 35:1 for ordinary high schools as set by the Department of Education but is the highest in the District. High learner-teacher ratios are associated with lower learner outcomes due to reduced individual learner attention. It should also be noted that teachers in government schools are typically faced with larger numbers of learners per teacher.

Learner Retention

The learner retention rate measures the proportion of learners in Grade 12 who were in Grade 10 two years prior. The Kannaland municipal area had the lowest learner retention rate in the District and increased only slightly from 57.1 per cent in 2019 to 58.4 per cent in 2021. While there is improvement, it still reflects that over 40 per cent of learners dropped out, emigrated out of the municipal area or failed a grade between Grade 10 and Grade 12. According to the General Household Survey in 2021, nationally, the main reasons for dropping out of school included a lack of funding for school fees, an inability to perform well in school, satisfaction with the level of education attained and feeling that education is useless. The Western Cape Education Department has prioritized improving the learner retention rate as part of the post-COVID recovery plan.

Education outcomes (Matric Pass Rates)

Education remains one of the key avenues through which the state is involved in the economy. In preparing individuals for future engagement in the labour market, policy choices and decisions in the sphere of education play a critical role in determining the extent to which future economic and poverty reduction plans can be realised. Kannaland's matric pass rate improved from 79.1 per cent in 2020 to 86.8 per cent in 2021. The matric pass rate is above the District rate of 84.4 per cent. This is however skewed by the low learner retention in the municipal area. Note that the Garden Route District had the highest matric pass rate across all the regions of the Western Cape.

Number of patients

Health

Healthcare facilities

According to the GHS of 2021 only 16.1 per cent of individuals in South Africa had access to medical aid. Government healthcare facilities are therefore crucial to provide primary health care to a large majority of persons in the country. In 2021, the Kannaland municipal area had 4 fixed primary healthcare facilities, 5 mobile/satellite clinics and one district hospital. The municipal area has 10 (12.2 per cent) out of the 82 healthcare facilities within the Garden Route District.

For TB and ART treatment the households also have access to 5 ART treatment sites and 5 TB clinics across the municipal area.

Emergency medical services

The provision of more operational ambulances can provide greater coverage of emergency medical services. Kannaland had 4 ambulances servicing the municipal area in 2021/22, translating to 1.8 ambulances per 10 000 people. This is higher than the District rate. Note that this only refers to Provincial ambulances and excludes all private service providers.

HIV/AIDS & Tuberculosis

In total, there were 778 registered patients receiving antiretroviral treatment (ART) in the Kannaland municipal area in 2021/22. The number of new patients receiving ART have increased from 50 in 2020/21 to 59 in 2021/22, indicating that a number patients have returned, as the COVID-19 infections and risk diminished. The number of registered patients receiving TB treatment in the Kannaland municipal area increased by 32.8 per cent from 137 in 2020/21 to 182 in 2021/22. Despite the increase in TB patients, there has been a decline in TB treatment sites from 8 in 2017/18, thereafter 7 in 2020/21, and a further decline to 5 in 2021/22.

Child health

The immunisation coverage rate for children under the age of one in the municipal area decreased from 105.3 per cent in 2020/21 to 101.8 per cent in 2021/22, still an outstanding rate. The overall District rate however declined from 68.9 per cent to 68.0 per cent across the same period. The number of malnourished children under five years of age (severe acute malnutrition) per 100 000 people in the municipal area worsened from 2.7 in 2020/21 to 5.6 in 2021/22. The percentage of babies born that weighed less than 2.5 kg have also worsened (increased) from 14.3 per cent to 23.6 per cent. This points to a lack of access to nutritious food for an increasing number of households as well as poor health care in pregnancy. The neonatal mortality rate (deaths per 1 000 live births before 28 days of life) for the municipal area was another area that worsened, declining from 0.0 in 2020/21 to 9.4 in 2021/22, and is higher than the District average of 7.7.

Maternal health

In 2020/21, the Kannaland municipal area recorded 0 maternal deaths per 100 000 live births. The rate has remained constant at least for the last five years. There has been a decrease in teenage pregnancies within the Kannaland municipal area. In 2021/22, 9.3 per cent of deliveries were for females under the age of 20 and is lower than the District rate of 15.4 per cent. The proportion of pregnancy terminations remained at zero per cent of the female population aged 15 to 44 between 2020/21 and 2021/22.

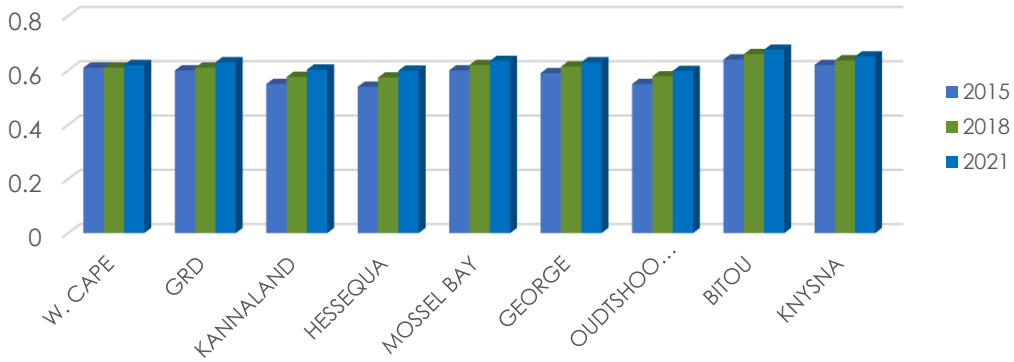

POVERTY

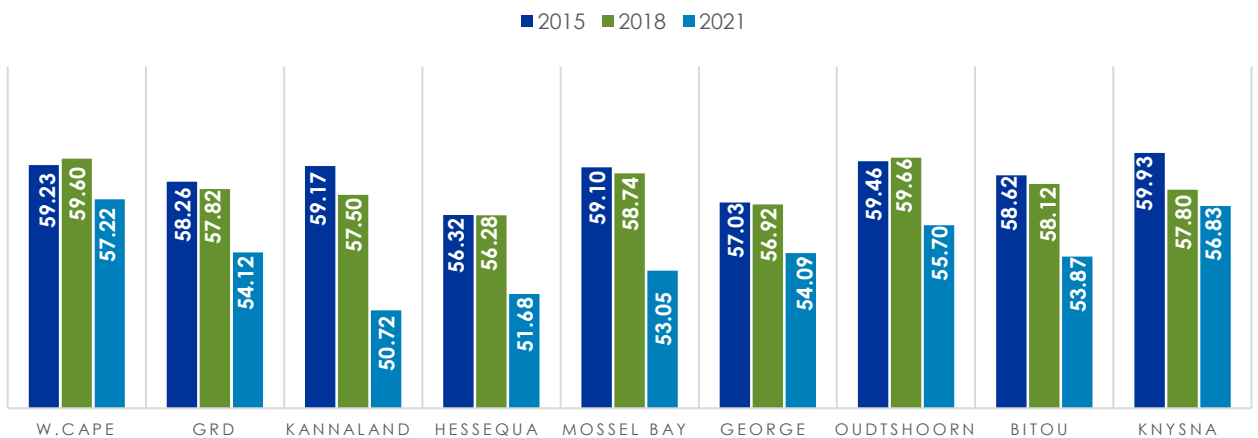

GDP per capita

Income inequality

Poverty Line

Poverty

GDPR Per Capita

An increase in GDPR per capita, i.e., GDPR per person, is experienced only if the economic growth rate exceeds the population growth rate. At R69 165 in 2021, Garden Route District's real GDPR per capita is below that of the Western Cape's figure of R81 650 for the same period. Kannaland has underperformed against both the District and the Province by recording a per capita income figure of only R42 186 in 2021.

This figure is the lowest recorded across the District in 2021 and has regressed moderately from 2015.

Income Inequality

Even though real GDPR per capita reflects changes in the overall well-being of the population, the money will not be equally distributed across the population. South Africa suffers among the highest levels of inequality in the world when measured by the commonly used Gini index. Inequality manifests itself through a skewed income distribution, unequal access to opportunities, and regional disparities.

The National Development Plan (NDP) has set a target of reducing income inequality in South Africa from a Gini coefficient of 0.7 in 2010 to 0.6 by 2030. Income inequality has increased in the Garden Route District between 2015 (0.6) and 2021 (0.63). These disparities in income are certain to worsen across the medium term given the potential aftereffects of the COVID-19 pandemic. Kannaland has displayed a similar trend to that of the District's trajectory with inequality levels worsening from 0.55 in 2015 to 0.60 in 2021. Along with the Oudtshoorn and Hessequa municipal areas, it has the lowest income inequality in the District.

Poverty Line

The Upper Bound Poverty Line (UBPL) head count ratio is the proportion of the population living below the UBPL i.e., that cannot afford to purchase adequate levels of food and non-food items. The UBPL in South Africa is R1 227 (in April 2019 prices) per person per month.

Poverty affects the social development of communities through lower life expectancy, malnutrition and food insecurity, higher exposure to crime and substance abuse, lower educational attainment and poor living conditions. The NDP aims to eliminate poverty by 2030.

In 2021, 50.7 per cent of Kannaland's population fell below the UBPL. This figure improved from the 59.2 per cent and 57.5 per cent recorded for 2015 and 2018, respectively. Kannaland's poverty rate is below the District (54.1 per cent) and the Western Cape (57.2 per cent) rate.

Basic Service Delivery

The Constitution stipulates that every citizen has the right to access to adequate housing and that the state must take reasonable legislative and other measures within its available resources to achieve the progressive realisation of this right. Access to housing also includes access to services such as potable water, basic sanitation, safe energy sources and refuse removal services, to ensure that households enjoy a decent standard of living.

This section considers to what extent this has been achieved by reflecting on the latest available information from Quantec Research for 2021. The latest official statistics was collected by Statistics South Africa for the 2016 Community Survey; the 2021 Census will provide the updated official statistics. The information on free basic services is obtained from Statistics South Africa's Non-Financial Census of Municipalities survey findings.

Housing and Household Services

With a total of 7 041 households in the Kannaland municipal area, 97.3 per cent had access to formal housing. This is significantly higher than the Garden Route District average of 84.4 per cent. The area also had a lower proportion of informal dwellings at 2.4 per cent compared to 14.9 per cent in the District.

Service access levels for all services within the municipal area were lower than the access to formal housing, with access to piped water inside dwelling/yard or communal/neighbor's tap at 95.5 per cent, access to a flush or chemical toilet at 96.6 per cent, access to electricity (including a generator) for lighting at 91.4 per cent and the removal of refuse at least weekly by the local authority at 79.1 per cent of households. These access levels were also below the District figures for all services.

Free Basic Services

Municipalities also provide a package of free basic services to households who are financially vulnerable and struggle to pay for services. The number of households receiving free basic services in the Kannaland municipal area has been on a steady increase since 2017. The stressed economic conditions is expected to continue exerting pressure on household income, which will likely further increase the demand for free basic services and in turn the number of indigent households.

SAFETY AND SECURITY

Safety and Security

Murder

Murder is defined as the unlawful and intentional killing of another person.

Within the Kannaland municipal area, the number of murders increased from 4 in 2019/20 to 6 in 2020/21, with one additional murder per annum over this period. Kannaland municipal area's murder rate (per 100 000 people) is lower than that of the Garden Route District at 26 and 32 respectively during 2021/22. According to the United Nations Office on Drugs and Crime (2019) the 2017 global murder rate was 6.1 (per 100 000 people) and is significantly below the reports within both the District and the municipal area.

Sexual Offences

Sexual offences include rape (updated to the new definition of rape to provide for the inclusion of male rape), sex work, pornography, public indecency and human trafficking.

In 2021/22, there were 40 sexual offences in the Kannaland municipal area and 904 reported cases in the total Garden Route District. The incidence of sexual offences (per 100 000 people) in the Kannaland municipal area (182) was higher than that of the District (144) in 2021/22. South Africa is amongst the top 5 countries in the world with respect to reports of rape, therefore it is a huge problem that needs to be addressed. A National Strategic Plan on gender-based violence and femicide has been developed in response.

Drug-related Offences

Drug-related crimes refer to the situation where the perpetrator is found to be in possession of, under the influence of, or selling illegal drugs.

Drug-related crime within the Kannaland municipal area decreased slightly from 371 cases in 2019/20 to 367 cases in 2021/22. The Garden Route District's drug-related offences decreased significantly from 2019/20 to 2020/21 but increased by almost 20 per cent in 2021/22. When considering the rate per 100 000 people, with 1 673 drug-related offences per 100 000 people in 2021/22, the Kannaland area's rate is significantly higher than the District's 748 per 100 000 population, reflecting challenges with substance abuse in the municipal area.

Driving under the influence (DUI)

A situation where the driver of a vehicle is found to be over the legal blood alcohol limit.

The number of cases of driving under the influence of alcohol or drugs in the Kannaland municipal area has been on an upward trend from 44 in 2019/20 to 75 in 2021/22. This translates into a rate of 340 per 100 000 people in 2021/22, which is more than double the District's 148 per 100 000 people.

Road user fatalities

Road users that died in or during a crash i.e., drivers, cyclists, passengers, pedestrians.

Despite the increase in DUI's there has been a decline in the number of fatal crashes in the Kannaland municipal area from 7 in 2020/21 to 3 in 2021/22. The crashes in 2021/22 claimed the lives of 4 road users.

Residential Burglaries

The unlawful entry of a residential structure with the intent to commit a crime, usually a theft.

The number of residential burglaries in the Kannaland municipal area decreased significantly from 252 in 2019/20 to 129 in 2021/22. Kannaland municipal area's rate of 590 per 100 000 population is below the District's 595 for 2021/22. The decrease in burglaries in the region is positive to note considering the increase (0.4 per cent) in the number of residential burglaries on a national level.
